Challenge - Laravel

For this challenge you need to create a new Laravel project and design a simple (hard-coded) personal website. The website consists of 4 pages: Home, About me, Blog and Contact. The website is a static one, meaning there are no forms, no options to submit data, no login functionality.

The four pages need to be registered in the routes file and you need to have either one controller for each page or a separated controller for each page (either 1 or 4 Controller classes in total).
Each page should be a separate blade file.

In order to complete the challenge for maximum points, the header and the footer of each page should be parts of a separate layout blade file which will be extended by each of the 4 website pages.

The screenshots are attached together with this document.

Scoring :

1 point A complete design of the front-end.
3 points Make controllers, routes for the pages and connect them.
5 points Make the header and footer as separate blade files and include them in all pages.

Deadline:

One week after its presentation, 23:59h end of the day.
